

## Splitboard Heel Lock Retrofit Kit

- Simple and effective heel locking device with dual height climbing wires.
- Compatible with Speed Rail, Light Rail, and Slider Track.
- Use for short descents in rolling terrain, traversing ridgelines, and sidestepping.

**WARNING:** Fixed mode on Light Rail Crampon and Splitboard Crampon for Slider Track is NOT possible with the inclusion of the Voile Heel Lock.

## Installation:

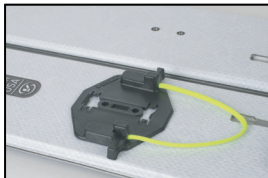

1.) Thread each pull-cord end through the holes on the Heel Lock's pull tabs.

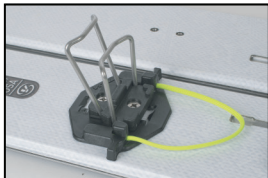

2.) Tie a simple over-hand knot at both ends of the cord.

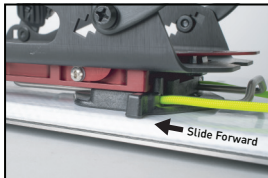

3.) Remove all hardware from the heel inserts on both board halves. Blow out the inserts to clear them of debris.

4.) Position the Guide Washer over the inserts with the flat side facing the board's topsheet. Place the Heel Lock over the Guide Washer with the pull cord pointed towards the tail of your board.

5.) Position your Climbing Block and Climbing Wires over the inserts with the longer 75mm wire facing the board's tip. Fasten screws securely.

6.) To lock your heel: Lower both climbing wires, rotate your binding down to rest flat against the board, and slide the Heel Lock forward.
