

Tech Alert

ATTENTION! After pumping out hundreds of thousands of puck sets from our old injection molds we have determined it time to cut new ones. Beginning immediately, Voilé will be producing and shipping newly designed pucks and discs. This was done to increase compatibility, improve the quality of our injections, tighten tolerances and increase production. The new pucks and discs will be molded from the same, super tough, fiberglass impregnated nylon as our previous design. **Note:** The new pucks and discs **are not compatible** with the old pucks and discs (**see next page**) and vice versa. But, both designs are compatible with all puck based splitboard bindings and inserted splitboards. As always, our splitboard parts are proudly made in Salt Lake City, UT.
